Dear Fang Fang

Further to your application for the assessment of the TST 069S Eco Stove, TST 069SN Eco Stove, TST096 Eco Stove against the essential requirements of the Construction Products Regulation 2011, I am pleased to send you the enclosed type examination certificate demonstrating compliance against the essential type testing requirements of the harmonised Standard BS EN 13240:2001+Amd 2:2004.

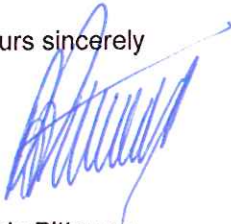

An electronic copy of your type test report 61384-1 will be sent to you directly. Please inform us if you have any problems receiving this document.

I would like to remind you that in order for you to fully comply with the requirements of the Construction Products Regulation 2011 you will also need to have in place a Factory Production Control (FPC) system as detailed in the above harmonised Standard. With this, and any other evidence you need to demonstrate compliance with the relevant Regulation, you can affix the UKCA/UKNI mark to your product. In accordance with the Construction Products Regulation 2011 you are also required to have a Declaration of Performance; this could be provided with each appliance or could be available on your website.

The test report is issued under System 3 of the Assessment and Verification of Constancy of Performance requirements stated in Annex V of the Construction Products Regulation 2011. Therefore, the manufacturer cannot apply the Kiwa GASTEC Approved Body number to their appliance because the Factory Production Control system has not been independently assessed by us.

Thank you for using Kiwa Gastec for your Type Examination requirements and we look forward to working with you in the future.

Yours sincerely

Andy Pittaway
Certification Officer
For, and on behalf of, Kiwa Ltd

Note:- Under the CPR there are five systems of AVCP. As per Annex V of the Regulation System 3 requires Declaration of Performance of the essential characteristics of the construction product by the manufacturer on the basis of the following items:

- a) The manufacturer shall carry out factory production control
- b) The notified testing laboratory shall carry out determination of the product-type on the basis of type testing (based on sampling carried out by the manufacturer), type calculation, tabulated values or descriptive documentation of the product
